-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over AAPA (applicant's admitted prior art as set forth on page 2, section [0004] through page 3, section [0005] of the specification) in view of Kreckel et al. (US 6,491,781 B1).

Regarding claims 1-21, AAPA teaches attaching data storage cards to a display, but does not teach the specific attachment device as claimed. Kreckel teaches removably adhering a device on a display, including an attachment device (12) having a carrier strip (24) with a first adhesive (22) that is permanent and a second adhesive (26) that is reusable. These adhesive includes pressure sensitive (see col. 13), hot-melt (see col. 13), and allow for easy removal and replacement of the device. Thus, It would have been obvious to one having ordinary skill in the art at the time the invention was made to use such an adhering device as taught by Kreckel in AAPA to allow for easy removal and replacement of the device. Although Kreckel is silent as to the permanent adhesive being shrink resistant and being in a partially liquid state, it would have been obvious for the permanent adhesive being shrink resistant in order to reduce the risk of tearing or

otherwise deforming the display material adhered to the device, and being in a partially liquid state since the adhesive is applicable and hot-melt. Kreckel teaches also the first adhesive (22) being pressure sensitive, being relatively permanent, and having stronger peeling strength than the second adhesive (26) at selectable percentage, and AAPA teaches the storage device being a data card. Kreckel also teaches a method of making a display assembly as set forth in the specification (see cols. 6-8 and 13-14).
